Save the license file to your desktop. Click "Local Activation" and browse the license file and "Import"

Online Activation

Calibration

STEP

STEP Calibration Board **01** Assembly

Insert calibration board onto the board holder

Calibration Board Placement

Place the calibration board on the center of the turntable facing the scanner.

.

..............

Run the Calibration

Open software, choose your scanner model of EinScan-SP and go to NEXT. Getting started with calibration button, following the on-screen instructions to turn the calibration board in 3 directions. NOTE: Rotate the calibration board only during calibration.

Calibration Tips

- You should calibrate the scanner in the initial set-up, or IF YOU MOVETHE SCANNER OR TURNTABLE.
- When you find the scanned quality is not as good as initial set-up, you can recalibrate your scanner.
- Calibration needed when alignment mistake or failure frequently appear during the scanning.

How to Get a Successful Scan

What Can Be Scanned?

Great to Scan Under Auto Scan Mode

- Objects larger than 30*30*30 mm (1.2*1.2*1.2 in)
- Objects smaller than 250*250*250 m m (38*38*38 in)
- Object weighing less than 5 kg (11 lbs)

Difficult to Scan

- Transparent objects like glass
- Shining or reflective objects like varnished metal
- Dark color object like black keyboard
- Fuzzv objects like hair
- Solution: Painting white powder on objects will improve the scan quality.

Do NOT Suggest to Scan

- Moving objects
- Hollow pattern object like Eiffel Towersouvenirs
- Objects smaller than 30*30*30 m m (1.2*1.2*1.2 in)

Note: If the size and weight of the object are out as mentioned above, please scan on tripod without turntable by Fixed Scan Mode.

Our Scan Process

Build Project

Click "New Project" button to start a new scan.

Texture Scan Option

Choose texture scan if color texture is needed for scanning. Or, choosenon-texture scan (Texture scan is taking little longer time, and white balance test should be done before texturescanning).

.

.

Place Object

Make sure the object is stable during the scanning.

difficult

toscan

...................

Adjust Brightness

Choose the brightness setting according to your object surface condition. Too much red appears on the object shown in the window means over bright. Note: Please check the exposure instruction in user

Scan

Bright & Dark

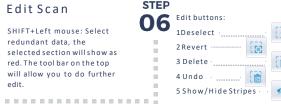

Click Scan button to start scanning.

STEP

Our Scan Process

Edit Scan

SHIFT+Left mouse: Select redundant data, the selected section will show as red. The tool bar on the top will allow you to do further

Complete the STEP Scanin More 07 Directions

Sometimes, if one rotate can't give you a full scan, you can place the object in other directions to capture the missing faces. After edit, save the current scanned data, the current data will be aligned to the last scanned data automatically.

Click to save data and exit the single-piece edition.

Manual Alignment

If automatic alignment fail during scanning, you can use manualalignment (Misalignment doesn't frequently happen. Please refer the detail of manual alignment in user manual)

.

Mesh

When the scan is completed, go mesh directly. WatertightorUnwatertight model can be selected due to your request.

Watertight is closed model which can be printed directly. Unwatertightmodelisa non-closed model keeping the missing scanned area as it is, which is usually chosen for further design purpose in otherprogram.

•

Save

Asc, stl, obj and ply are available

.................

Press the touch switch for I second twice to turn the scanner off.
